HW01 - Due Sunday 17 January 2016 before 11:59PM

Dr. Touma

January 9, 2016

Write a C program to compute the volume of a cube. Name your code cube_volume.c The volume of a cube is the product of its width, height, and length. Ask the user to input each and display the output. Your variables should be of type double. Look at the area.c code as an example of how to take input from the user.
